

Operationalizing Security and Compliance for OSHEAN Members

OSHEAN is bringing a practical, scalable approach to governance, risk, and compliance (GRC) with its new service powered by Apptega. Built for the realities of healthcare, higher education, government, K-12, libraries, and community anchor institutions, this offering replaces fragmented processes with a unified, operational system for managing security and compliance as an ongoing program, rather than a one-time event.

GOVERNANCE

RISK

COMPLIANCE

A Unified Approach to Security, Risk, and Compliance

Most organizations are still managing compliance through spreadsheets, disconnected tools, and manual processes. The result is inconsistency, limited visibility, and a constant scramble to prepare for audits.

OSHEAN's Apptega GRC platform changes that by bringing everything into a single platform, connecting security controls, risk management, and compliance frameworks into one continuous workflow. The result is a clear, real-time understanding of where you stand, what needs attention, and how to move forward.

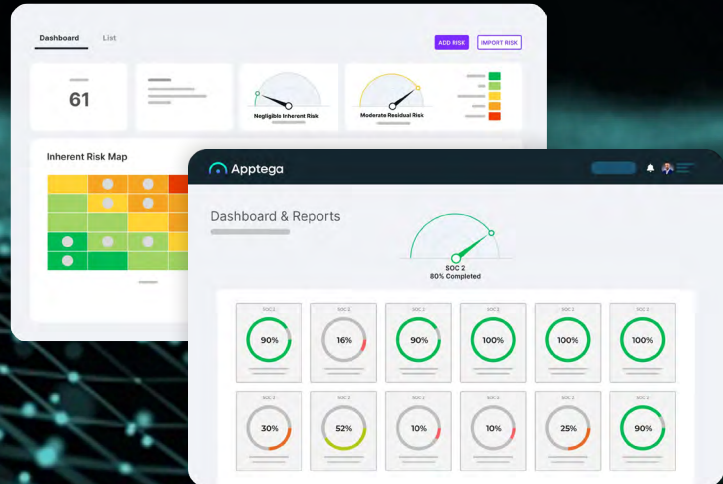

From Checklists to Continuous Compliance

Using the OSHEAN Apptega GRC service, members can:

- Map controls across multiple frameworks simultaneously
- Assign ownership and accountability across teams
- Collect, store, and manage audit evidence in one place
- Track progress in real time with full transparency

Instead of preparing for compliance at a point in time, organizations move to a continuous, always-on model, where audit readiness is built into daily operations.

From Fragmentation to Operational Efficiency

OSHEAN's approach is designed to eliminate the inefficiencies that slow teams down:

- **Reduce manual work:** Automate up to 89% of repetitive compliance tasks
- **Accelerate time-to-compliance:** Achieve readiness up to 75% faster
- **Improve decision-making:** Evaluate security posture twice as fast

By standardizing workflows and centralizing activities, teams spend less time managing processes and more time strengthening security.

Built for Complex, Resource-Constrained Environments

OSHEAN members operate in decentralized environments with limited resources and increasing regulatory pressure. This service is designed to:

- **Eliminate duplicate work:** One assessment can satisfy multiple frameworks
- **Create shared visibility:** Align security, IT, and compliance teams in a single workspace
- **Extend insight to leadership:** Provide clear, measurable reporting for executives and boards

A Smarter Way to Manage Risk and Compliance

OSHEAN's Apptega GRC service shifts the posture of an organization from reactive and fragmented to proactive and controlled. It gives teams a way to:

- Understand their current security posture with clarity
- Prioritize actions based on real risk
- Demonstrate measurable progress over time
- Maintain continuous audit readiness without disruption

By partnering with Apptega, OSHEAN is giving its members an opportunity to simplify complexity, reduce administrative burden, and turn compliance into a strategic advantage.
