

OSHEAN Managed Firewall Services: Enterprise Security, Expertly Managed

Dedicated Security, Built for Your Organization

Every deployment includes:

- A dedicated Fortinet Virtual Domain (VDM) assigned exclusively to your organization
- Complete logical isolation from other member environments
- Independent security policies, routing, VPNs, and access controls
- Administrative visibility with collaborative policy management

The result is a secure, flexible environment tailored to your network requirements.

Comprehensive Protection Without Complexity

Modern cybersecurity demands more than basic firewall management. OSHEAN's Managed Firewall Service brings together:

- Firewall rule implementation and lifecycle management
- Intrusion Prevention System (IPS) protection
- Unified threat intelligence and threat prevention services
- Web and application filtering
- Secure VPN connectivity with multi-factor authentication support

Members gain enterprise-class security controls without the overhead of managing them internally.

Always-On Operations and Support

Security threats loom at all hours. Our Managed Firewall service includes:

- 24x7 monitoring and alerting
- Proactive incident response and escalation
- Real-time communication during maintenance and security events
- Flexible change management through either member administration or NOC-assisted requests

This operational model helps organizations respond faster while reducing internal workload.

Built for Resilience and Continuous Security

OSHEAN's managed platform is designed for reliability and long-term protection through:

- Redundant firewall infrastructure
- Geographically distributed data center architecture
- Continuous firmware maintenance and security patching
- Rapid response to critical vulnerabilities
- Configuration backup, recovery, and change auditing

All updates are performed through controlled maintenance processes with rollback capability and documented change management.

Enterprise Security as a Service

As cyber threats grow more sophisticated and internal resources become increasingly constrained, organizations need security solutions that are both effective and sustainable. OSHEAN's Managed Firewall Service provides the protection, operational expertise, and service assurance needed to secure critical infrastructure, without adding complexity, staffing requirements, or management overhead.
